

BE FAST TO SAVE THE LIFE

BY
Prof. Dr. Mohamed EL
Setiha
Prof. of cardiology
Tanta University

- Female patient aged 75 Yrs, diabetic, hypertensive, dylipedemic.
- Normal renal function
- * She had a hospital admission with unstable angina

- PCI to LAD and RCA was decided and Amplatz Lt catheter was chosen to manage both vessels and give support to manipulate the material in such tortuous RCA

BUT THE SCENAREO DOES NOT GO AS IT WAS PLANNED

- Now after solving the disaster and saving her life we moved to treat RCA
- BUT UNEXPECTED SCENARIO IS STILL THERE
